## ABSTRACT

*Current Population Survey, February 2018: Annual Arts Benchmarking Survey Supplement [machine-readable data file] conducted by the Bureau of the Census for the Bureau of Labor Statistics. - Washington: Bureau of the Census [producer and distributor], 2018.*

### Type of File

Microdata; unit of observation is individuals within housing units.

### Universe Description

The universe consists of all persons in the civilian noninstitutional population of the United States living in households. The probability sample selected to represent the universe consists of approximately 56,000 households.

### Subject-Matter Description

Data are provided on labor force activity for the week prior to the survey. Comprehensive data are available on the employment status, occupation, and industry of persons 15 years old and over. Also shown are personal characteristics such as age, sex, race, marital status, veteran status, household relationship, educational background, and Hispanic origin.

The Annual Arts Benchmark Survey questions were asked of MIS 3 and 7 households. The respondent 18 years of age or older and his/her spouse as well as a second randomly selected person and his/her spouse/partner as applicable were asked the supplement questions. Questions asked include the following:

- Do any leisure activities such as working with pottery, ceramics or jewelry, leatherwork, woodwork, or any weaving, crocheting, needlepoint, knitting, or sewing.
- Play a musical instrument.
- Perform any acting, dancing, or singing.
- Take part in any visual artistic activity or creative writing.

### Geographic Coverage

States, regions and divisions are identified in their entirety. Within confidentiality restrictions; indicators are provided for 278 selected core-based statistical areas (CBSA), 30 selected combined statistical areas (CSA), 217 counties, and 76 central cities in multi-central city core-based statistical areas or combined statistical areas. Also within confidentiality restrictions, indicators are provided for metropolitan/nonmetropolitan, central city/balance metropolitan, and CBSA size.

### Technical Description

**File Structure:** Rectangular.

**File Size:** 145,314 logical records; 1,076 character logical record length.

**File Sort Sequence:** State rank by CBSA/CSA rank by household identification number by line number.

## Reference Materials

*Current Population Survey, February 2018: Annual Arts Benchmarking Survey Supplement Technical Documentation*. Documentation contains this abstract, questionnaire facsimiles, and record layouts of the file. It is available on the Census Bureau's website at <http://www.census.gov/programs-surveys/cps/technical-documentation/complete.html>

U.S. Census Bureau. *The Current Population Survey Design and Methodology* (Technical Paper 66) describes in detail the sample design and survey procedures used as well as the accuracy of estimates and sampling errors. Reference copies should be available from most public libraries or Federal Depository Libraries.

For information about the Current Population Survey and other Census Bureau data products, be sure to visit our online Surveys/Programs on the Census Bureau's home page (<http://www.census.gov/>) where you can search our knowledge base and submit questions.

## File Availability

You can download the file from our FTP site at [http://thedataweb.rm.census.gov/ftp/cps\\_ftp.html](http://thedataweb.rm.census.gov/ftp/cps_ftp.html).

## ATTACHMENT 2

### OVERVIEW

#### Current Population Survey

##### Introduction

The Current Population Survey (CPS) is the source of the official government statistics on employment and unemployment. The CPS has been conducted monthly for over 50 years. Currently, we obtain interviews from about 56,000 households monthly, scientifically selected on the basis of area of residence to represent the nation as a whole, individual states, and other specified areas. Each household is interviewed once a month for four consecutive months one year, and again for the corresponding time period a year later. This technique enables us to obtain reliable month-to-month and year-to-year comparisons at a reasonable cost while minimizing the inconvenience to any one household.

Although the main purpose of the survey is to collect information on the employment situation, a very important secondary purpose is to collect information on demographic characteristics such as age, sex, race, marital status, educational attainment, family relationship, occupation, and industry. From time to time, additional questions are included on health, education, income, and previous work experience. The statistics resulting from these questions serve to update similar information collected once every 10 years through the decennial census, and are used by government policymakers and legislators as important indicators of our nation's economic situation and for planning and evaluating many government programs.

The CPS provides current estimates of the economic status and activities of the population of the United States. Because it is not possible to develop one or two overall figures (such as the number of unemployed) that would adequately describe the whole complex of labor market phenomena, the CPS is designed to provide a large amount of detailed and supplementary data. Such data are made available to meet a wide variety of needs on the part of users of labor market information.

Thus, the CPS is the only source of monthly estimates of total employment (both farm and nonfarm); nonfarm self-employed persons, domestics, and unpaid helpers in nonfarm family enterprises; wage and salaried employees; and, finally, estimates of total unemployment.

It provides the only available distribution of workers by the number of hours worked (as distinguished from aggregate or average hours for an industry), permitting separate analyses of part-time workers, workers on overtime, etc. The survey is also the only comprehensive current source of information on the occupation of workers and the industries in which they work. Information is available from the survey not only for persons currently in the labor force but also for those who are outside the labor force. The characteristics of such persons - whether married women with or without young children, disabled persons, students, older retired workers, etc., can be determined. Information on their current desire for work, their past work experience, and their intentions as to job seeking are also available.

For a more detailed discussion about the basic labor force data gathered on a monthly basis in the CPS survey, see "Explanatory Notes and Estimates of Error" in any recent issue of the *Employment and Earnings*, a Bureau of Labor Statistics periodical. This source is referred to on the next page.

## **CPS Sample Design**

The current CPS sample is selected based on 2000 census information. The first stage of the 2000 sample design created 2,025 geographic areas called primary sampling units (PSUs) in the entire United States. These PSUs were grouped into strata within each state. Some of these PSUs formed strata by themselves and were in sample with certainty, which is referred to as self-representing. Of the remaining nonself-representing PSUs, one PSU was selected from each stratum with the probability of selection proportional to the population of the PSU. A total of 824 PSUs were selected for sampling. The second stage of the sample design selected housing units within these PSUs.

Approximately 72,000 housing units are assigned for interview each month, of which about 60,000 are occupied and thus eligible for interview. The remainder are units found to be destroyed, vacant, converted to nonresidential use, containing persons whose usual place of residence is elsewhere, or ineligible for other reasons. Of the 60,000 occupied housing units, approximately 7 percent are not interviewed in a given month due to temporary absence (vacation, etc.), the residents are not found at home after repeated attempts, inability of persons contacted to respond, unavailability for other reasons, and refusals to cooperate. The interviewed households contain approximately 108,000 persons 15 years old and over, approximately 27,000 children 0-14 years old, and about 450 Armed Forces members living with civilians either on or off base within these households. A more precise explanation regarding the CPS sample design is provided in "Explanatory Notes and Estimates of Error: Household Data - Sampling" in any issue of *Employment and Earnings*.

## **Relationship of Current Population Survey Files to Publications**

Each month, a significant amount of information about the labor force is published by the Bureau of Labor Statistics in the *Employment and Earnings* and *Monthly Labor Review* reports.

As mentioned previously, the CPS also serves as a vehicle for supplemental inquiries on subjects other than employment, which are periodically added to the questionnaire. From the basic and supplemental data, the Bureau of the Census issues three series of publications under the general title Current Population Reports:

- P-20 Population Characteristics
- P-23 Special Studies
- P-60 Consumer Income

All Current Population Reports, including the other series for population estimates and projections and special censuses, may be obtained by subscription from the U.S. Government Printing Office at 202-783-3238. Subscriptions are available as follows: Population Characteristics, Special Studies, and Consumer Income series (P-20, P-23, P-60) combined, \$101 per year (sold as a package only); Population Estimates and Projections, (P-25), \$27 per year. Single issues may be ordered separately; ordering information and prices are provided in the Bureau of the *Census Catalog and Guide*, the *Monthly Product Announcement* (MPA), and in *Census and You*. Selected reports also may be accessed on the INTERNET at <http://www.census.gov/prod/www/subject.html#pop>

## **Geographic Limitations**

The CPS sample was selected so that specific reliability criteria were met nationally, for each of the 50 States and for the District of Columbia. Since 1985, these reliability criteria have been maintained through periodic additions and deletions in the State samples. Estimates formed for geographic areas identified on the microdata file which are smaller than states are not as reliable.

## Weights

Under the estimating methods used in the CPS, all of the results for a given month become available simultaneously and are based on returns for the entire panel of respondents. The CPS estimation procedure involves weighting the data from each sample person. The base weight, which is the inverse of the probability of the person being in the sample, is a rough measure of the number of actual persons that the sample person represents. Almost all sample persons in the same state have the same base weight, but the weights across states are different. Selection probabilities may also differ for some sample areas due to field subsampling, which is done when areas selected for the sample contain many more households than expected. The base weights are then adjusted for noninterview, and the ratio estimation procedure is applied.

1. **Noninterview adjustment.** The weights for all interviewed households are adjusted to the extent needed to account for occupied sample households for which no information was obtained because of absence, impassable roads, refusals, or unavailability of the respondent for other reasons. This noninterview adjustment is made separately for clusters of similar sample areas that are usually, but not necessarily, contained within a state. Similarity of sample areas is based on Core-Based Statistical Area (CBSA) status and size. Within each cluster, there is a further breakdown by residence. Each CBSA cluster is split by "principal city" and "balance of the CBSA." The proportion of occupied sample households not interviewed fluctuates around 8 percent depending on weather, vacations, etc.
2. **Ratio estimates.** The distribution of the population selected for the sample may differ somewhat, by chance, from that of the population as a whole in such characteristics as age, race, sex, and state of residence. Because these characteristics are closely correlated with labor force participation and other principal measurements made from the sample, the survey estimates can be substantially improved when weighted appropriately by the known distribution of these population characteristics. This is accomplished through two stages of ratio adjustment as follows:
  - a. *First-stage ratio estimate.* The purpose of the first-stage ratio adjustment is to reduce the contribution to variance that results from selecting a sample of PSUs rather than drawing sample households from every PSU in the nation. This adjustment is made to the CPS weights in two race cells: black and nonblack; it is applied only to PSUs that are nonself-representing and for those states that have a substantial number of black households. The procedure corrects for differences that existed in each state cell at the time of the 2000 census between 1) the race distribution of the population in sample PSUs and 2) the race distribution of all PSUs (both 1 and 2 exclude self-representing PSUs).
  - b. *Second-stage ratio estimate.* This procedure substantially reduces the variability of estimates and corrects, to some extent, for CPS undercoverage. The CPS sample weights are adjusted to ensure that sample-based estimates of population match independent population controls. Three sets of controls are used:
    - 1) 51 state controls of the civilian noninstitutional population 16 years of age and older
    - 2) national civilian noninstitutional population controls for 14 hispanic and 5 nonhispanic age-sex categories
    - 3) national civilian noninstitutional population controls for 66 white, 42 black, and 10 "other" age-sex categories

The independent population controls are prepared by projecting forward the resident population as enumerated on April 1, 2000. The projections are derived by updating demographic census data with information from a variety of other data sources that account for births, deaths, and net migration. Estimated numbers of resident Armed Forces personnel and institutionalized persons reduce the resident population to the civilian noninstitutional population. Estimates of net census undercount, determined from the Post Enumeration Survey, are added to the population projections. Prior to January 2003, the projections were based on earlier censuses, and prior to January 1994, there was no correction for census undercount. A summary of the current procedures used to make population projections is given in "Revisions in the Current Population Survey Effective January 2003" in the January 2003 issue of Employment and Earnings.

## **Comparability of CPS From Microdata Files With Published Sources**

Although total estimates of the total population will equal published estimates, labor force estimates produced from a microdata file may not be directly comparable or identical with the published nonseasonally adjusted labor force data. The official labor force statistics published by the Bureau of Labor Statistics (BLS) are calculated using the CPS composite weight (PWCMPWGT). Anyone wanting to replicate not seasonally adjusted BLS estimates should use this weight. However, not all estimates made from a public use file will match such weighted published estimates. This is because of various steps taken in the creation of CPS public use files to protect the confidentiality of CPS respondents. Top side estimates for most major demographic and economic categories such as age, race, gender and major labor force status will agree with the published totals; however, estimates for small groups/combinations of these characteristics will differ. The same is true for any estimates for any demographic or labor force characteristic not listed above. Such estimates will be similar but not identical.

Another factor also inhibits microdata comparison with published labor force data. This is the seasonal adjustment that is applied to many published statistics. This adjustment is used to adjust for normal seasonal variations to help distinguish the underlying economic situation in month-to-month changes and is not reflected in any of the weights or variables included on the public use files.

Shown below are data from January and July 2015 which demonstrate how estimates compiled using the final weights from the microdata file may differ from the published composited estimates, with and without seasonal adjustment. Note that the composite estimation procedure was not used for estimates published from January 1994 to May 1994. For a further description of both the composite estimator and seasonal adjustment, see the most recent of the CPS Technical Paper (66 or 77).

## Comparison of CPS Estimates from Microdata Files with Published Sources

## **ATTACHMENT 3**

### **OVERVIEW**

#### **February 2018 Annual Arts Benchmarking Survey Supplement**

##### **General**

Census Bureau staff conducted the February 2018 Annual Arts Benchmarking Survey as a supplement to that month's Current Population Survey (CPS). The CPS is a monthly labor force survey in which interviews are conducted in approximately 59,000 households across the Nation. Attachment 9 contains the February 2018 Annual Arts Benchmarking Survey supplement questions asked of all applicable persons 18 years old or older. Attachment 2 comprises a description of the CPS entitled "Overview--Current Population Survey." A description of the February 2018 Annual Arts Benchmarking Survey follows.

##### **Data Collection**

The February 2018 Annual Arts Benchmarking Survey questions were asked of the CPS respondent and spouse as well as another randomly selected household member aged 18 or older and his/her spouse. About one-quarter of the sampled households were asked the supplement questions. Interview numbers 3 and 7 were asked the supplement questions. If the selected person had a spouse or partner then questions were also asked of the spouse/partner. The supplement contained questions about the sampled member's participation in various artistic activities from February 2017 through February 2018. Questions were asked about the use of pottery, ceramics, jewelry, leatherwork, metalwork and woodwork. They were also asked about weaving, crocheting, needlepoint, knitting, sewing, and whether they played a musical instrument. Questions also included doing any acting, singing or dance.

Interviews were conducted during the period of February 18-24, 2018.

##### **Data Processing**

The data processing involved editing the February 2018 Annual Arts Benchmarking Survey supplement data. The data processing involved a skip pattern edit of all Annual Arts Benchmarking Survey items. In addition, age was verified. The values for each variable are defined in the supplement record layout (Attachment 7).

## **February 2018 CPS Annual Arts Benchmarking Survey Supplement Computer File**

**CPS Labor Force Data.** The February 2018 file contains 145,314 records. Each record contains 1,076 characters. Attachment 7 contains the variable name, character size, location on record, universe, and the values of the variables.

The variable PRPERTYP (located in positions 161-162 on the CPS Basic Items Record Layout) determines the type of person as follows:

### **PRPERTYP**

- 1 = Child household member (0-14 years old)
- 2 = Adult civilian household member (15+ years old)
- 3 = Adult Armed Forces household member (15+ years old)

The variable HRINTSTA (located in positions 57-58 on the CPS Basic Items Record Layout) determines the interview status of the household.

### **HRINTSTA**

- 1 = Interview
- 2 = Type A Noninterview (These records represent households that were eligible for the July 2012 CPS interview, but were not interviewed because no one was home, household members were temporarily absent, etc.)
- 3 = Type B Noninterview (These records represent sample addresses determined to be temporarily ineligible for the CPS by virtue of being vacant, nonresidential, etc. These households could become eligible for a CPS interview.)
- 4 = Type C Noninterview (These records represent sample addresses determined to be ineligible for CPS by virtue of a permanent change such as demolished, condemned, etc. These addresses will not be visited again for CPS interviews.)

By combining the values of PRPERTYP (1-3) and HRINTSTA (2-4), the number of records can be determined.

The values of PRPERTYP are:

|                           | <u>Unweighted Counts</u> |
|---------------------------|--------------------------|
| 1 = (Child)               | 22,929                   |
| 2 = (Adult Civilian, 15+) | 101,012                  |
| 3 = (Adult, Armed Forces) | 394                      |

The values of HRINTSTA are:

|                         |        |
|-------------------------|--------|
| 1 = Interview           | 51,390 |
| 2 = Type A Noninterview | 9,444  |
| 3 = Type B Noninterview | 11,024 |
| 4 = Type C Noninterview | 511    |

### **February 2018 Annual Arts Benchmarking Survey supplement Data**

The February 2018 Annual Arts Benchmarking Survey supplement data are located in character positions 1001-1076 (See Attachment 7).

**Weighting.** The design of the supplement questionnaire required the final supplement weight (PWABSWGTT) to be created. This weight should be used to estimate the supplement variables.

Attachment 13 is a tally listing of unweighted counts. Use these counts to ensure the file is accessed properly.

**Data Contact.** For questions regarding the February 2018 supplement data, contact the CPS Survey Team at (301) 763-3806.

## ATTACHMENT 4

### GLOSSARY

#### Current Population Survey

**Age**—Age classification is based on the age of the person at his/her last birthday. The adult universe (i.e., population of marriageable age) is comprised of persons 15 years and over for CPS labor force data.

**Allocation Flag**—Each edited item has a corresponding allocation flag indicating the nature of the edit. See the attachment on allocation flags for more information. The second character of the item name is always "X".

**Armed Forces**—Demographic information for Armed Forces members (enumerated in off-base housing or on-base with their families) is included on the CPS data files. No labor force information is collected of Armed Forces members in any month. In March, supplemental data on income are included for Armed Forces members. This is the only month that non-demographic information is included for Armed Forces members.

**Civilian Labor Force**—(See Labor Force.)

**Class of Worker**—This refers to the broad classification of the person's employer. These broad classifications for current jobs are:

- 1) Federal government
- 2) State government
- 3) Local government
- 4) Private industry (including self-employed, incorporated)
- 5) Self-employed (not incorporated)
- 6) Working without pay

**Domain**—The domain for an item is a list or range of its possible values. Note that all unedited items have possible values of -1 (blank), -2 (don't know), and -3 (refused). Since all items have these possible values, they are not shown as valid entries for each item.

**Duration of Unemployment**—Duration of unemployment represents the length of time (through the current survey week) during which persons classified as unemployed are continuously looking for work. For persons on layoff, duration of unemployment represents the number of full weeks since the termination of their most recent employment. A period of two weeks or more during which a person is employed or ceased looking for work is considered to break the continuity of the present period of seeking work.

**Earners, Number of**—The file includes all persons 15 years old and over in the household with \$1 or more in wages and salaries, or \$1 or more of a loss in net income from farm or nonfarm self-employment during the preceding year.

**Edited item**—An edited item is allocated or imputed by the processing system. In most cases this means allocating a value where the unedited item contains a value of blank, "don't know", or "refused". The second character of the item name is always "E".

An edited version of an item exists only if that item is processed through the edits. If the edits never deal with a particular item, then that item only has an unedited version.

Since the instrument enforces skip patterns and consistency between many items, the edits are left mainly with the job of allocating missing values. Also, since an interviewer is allowed to "back up" in the interview, there may be "off-path" items filled in the unedited data. The edits also blank these off-path items if an edited version of the items exists.

**Education**—(See Level of School Completed.)

**Employed**—(See Labor Force.)

**Family**—A family is a group of two persons or more (one of whom is the householder) residing together and related by birth, marriage, or adoption. All such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

**Family Household**—A family household is a household maintained by a family (as defined above), and may include among the household members any unrelated persons (unrelated subfamily members and/or secondary individuals) who may be residing there. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives. (See the definition of Family).

**Family Weight**—This weight is used only for tallying family characteristics. In March, the weight on the family record is the March supplement weight of the householder or reference person.

**Final Weight**—Used in tabulating labor force items in all months, including March. The final weight is controlled to independent estimates for:

- 1) States
- 2) Origin, Sex, and Age
- 3) Age, Race, and Sex

This weight should not be used when tabulating March supplement data.

**Full-Time Worker**—Persons on full-time schedules include persons working 35 hours or more, persons who worked 1-34 hours for noneconomic reasons (e.g., illness) and usually work full-time, and persons "with a job but not at work" who usually work full-time.

**Group Quarters**—Group quarters are noninstitutional living arrangements for groups not living in conventional housing units or groups living in housing units containing nine or more persons unrelated to the person in charge.

**Head Versus Householder**—Beginning with the March 1980 CPS, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used.

**Highest Grade of School Attended**—(See Level of School Completed.)

**Hispanic/Non-Hispanic Origin**—A person's Hispanic/Non-Hispanic status in this file is determined on the basis of a question that simply asks "(Is/Are) (Name/you) Hispanic?"

**Hours of Work**—Hours of work statistics relate to the actual number of hours worked during the survey week. For example, a person who normally works 40 hours a week but who is off on the Veterans Day holiday is reported as working 32 hours even though he is paid for the holiday.

For persons working in more than one job, the figures related to the number of hours worked in all jobs during the week. However, all the hours are credited to the major job.

**Household**—A household consists of all the persons who occupy a house, an apartment, or other group of rooms, or a room, which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied as separate living quarters; that is, when the occupants do not live with any other person in the structure, and when there is direct access from the outside or through a common hall. The count of households excludes persons living in group quarters, such as military barracks and institutions. Inmates of institutions (mental hospitals, rest homes, correctional institutions, etc.) are not included in the survey.

**Household Weight**—The household weight is used for tallying household characteristics. In March, the household weight is the March Supplement weight of the householder.

**Householder**—The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the "reference person" to whom the relationship of all other household members, if any, is recorded.

**Householder With No Other Relatives in Household**—A householder who has no relatives living in the household. This is the entry for a person living alone. Another example is the designated householder of an apartment shared by two or more unrelated individuals.

**Householder With Other Relatives (Including Spouse) in Household**—The person designated as householder if he/she has one or more relatives (including spouse) living in the household.

**Industry, Occupation, and Class of Worker (I&O)—Current Job** (basic data)—For the employed, current job is the job held in the reference week (the week before the survey). Persons with two or more jobs are classified in the job at which they worked the most hours during the reference week. The unemployed are classified according to their latest full-time job lasting two or more weeks or by the job (either full-time or part-time). The I & O questions are also asked of persons not in the labor force who are in the fourth and eighth months in sample and who have worked in the last five years.

**Job Seekers**—All unemployed persons who made specific efforts to find a job sometime during the 4-week period preceding the survey week.

**Longitudinal Weight**—Used for gross flows analysis. Only found on adult records matched from month to month.

**PEMLR (Major Labor Force Recode)**—This classification is available for each civilian 15 years old and over according to his/her responses to the monthly (basic) labor force items.

**Labor Force**—Persons are classified as in the labor force if they are employed, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" includes all civilians classified as employed or unemployed. The file includes labor force data for civilians age 15 and over. However, the official definition of the civilian labor force is age 16 and over.

*1. Employed*

Employed persons comprise (1) all civilians who, during the survey week, do any work at all as paid employees or in their own business or profession, or on their own farm, or who work 15 hours or more as unpaid workers on a farm in a business operated by a member of the family; and (2) all those who have jobs but who are not working because of illness, bad weather, vacation, or labor-management dispute, or because they are taking time off for personal reasons, whether or not they are seeking other jobs. These persons would have a Monthly Labor Force Recode (MLR) of 1 or 2 respectively in characters 180-181 of the person record which designates "at work" and "with a job, but not at work." Each employed person is counted only once. Those persons who held more than one job are counted in the job at which they worked the greatest number of hours during the survey week. If they worked an equal number of hours at more than one job, they are counted at the job they held the longest.

*2. Unemployed*

Unemployed persons are those civilians who, during the survey week, have no employment but are available for work, and (1) have engaged in any specific job seeking activity within the past 4 weeks such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) are waiting to be called back to a job from which they had been laid off; or (3) are waiting to report to a new wage or salary job within 30 days. These persons would have an MLR code of 3 or 4 in characters 180-181 of the person record. The unemployed includes job leavers, job losers, new job entrants, and job reentrants.

*a. Job Leavers*

Persons who quit or otherwise terminate their employment voluntarily and immediately begin looking for work.

*b. Job Losers*

Persons whose employment ends involuntarily, who immediately begin looking for work, and those persons who are already on layoff.

*c. New Job Entrants*

Persons who never worked at a full-time job lasting two weeks or longer.

*d. Job Reentrants*

Persons who previously worked at a full-time job lasting two weeks or longer but are out of the labor force prior to beginning to look for work.

Finally, it should be noted that the unemployment rate represents the number of persons unemployed as a percent of the civilian labor force 16 years old and over. This measure can also be computed for groups within the labor force classified by sex, age, marital status, race, etc. The job loser, job leaver, reentrant, and new entrant rates are each calculated as a percent of the civilian labor force 16 years old and over; the sum of the rates for the four groups thus equals the total unemployment rate.

### 3. *Not in Labor Force*

All civilians 15 years old and over who are not classified as employed or unemployed. These persons are further classified by major activity: retired, unable to work because of long-term physical or mental illness, and other. The "other" group includes, for the most part, students and persons keeping house. Persons who report doing unpaid work in a family farm or business for less than 15 hours are also classified as not in the labor force.

For persons not in the labor force, data on previous work experience, intentions to seek work again, desire for a job at the time of interview, and reasons for not looking for work are asked only in those households that are in the fourth and eighth months of the sample, i.e., the "outgoing" groups, those which had been in the sample for three previous months and would not be in for the subsequent month.

Persons classified as NILF have an MLR code of 5-7 in characters 180-181 of the person record.

**Layoff**—A person who is unemployed but expects to be called back to a specific job. If he/she expects to be called back within 30 days, it is considered a temporary layoff; otherwise, it is an indefinite layoff.

**Level of School Completed/Degree Received**—These data changed beginning with the January 1992 file. A new question, "What is the highest level of school ... has completed or the highest degree ... has received?" replaced the old "Highest grade attended" and "Year completed" questions. The new question provides more accurate data on the degree status of college students. Educational attainment applies only to progress in "regular" school. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable to a school in the regular school system.

**Looking for Work**—A person who is trying to get work or trying to establish a business or profession.

**Marital Status**—The marital status classification identifies four major categories: single (never married), married, widowed, and divorced. These terms refer to the marital status at the time of enumeration.

The category "married" is further divided into "married, civilian spouse present," "married, Armed Force spouse present," "married, spouse absent," "married, Armed Force spouse absent," and "separated." A person is classified as "married, spouse present" if the husband or wife is reported as a member of the household even though he or she may be temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as "separated" included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily estranged from their spouses because of marital discord.

For the purpose of this file, the group "other marital status" includes "widowed and divorced," "separated," and "other married, spouse absent."

**Month-In-Sample**—The term is defined as the number of times a unit is interviewed. Each unit is interviewed eight times during the life of the sample.

**Never Worked**—A person who has never held a full-time civilian job lasting two consecutive weeks or more.

**Nonfamily Householder**—A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

**Nonworker**—A person who does not do any work in the calendar year preceding the survey.

**Nonrelative of Householder With No Own Relatives in Household**—A nonrelative of the householder who has no relative(s) of his own in the household. This category includes such nonrelatives as a foster child, a ward, a lodger, a servant, or a hired hand, who has no relatives of his own living with him in the household.

**Nonrelative of Householder With Own Relatives (Including Spouse) in Household**—Any household member who is not related to the householder but has relatives of his own in the household; for example, a lodger, his spouse, and their son.

**Other Relative of Householder**—Any relative of the householder other than his spouse or child; for example, father, mother, grandson, daughter-in-law, etc.

**Out Variable**—An instrument-created item that stores the results of another item.

**Own Child**—A child related by birth, marriage, or adoption to the family householder.

**Part-Time, Economic Reasons**—The item includes slack work, material shortages, repairs to plant or equipment, start or termination of job during the week, and inability to find full-time work. (See also Full-Time Worker.)

**Part-Time, Other Reasons**—The item includes labor dispute, bad weather, own illness, vacation, demands of home housework, school, no desire for full-time work, and full-time worker only during peak season.

**Part-Time Work**—Persons who work between 1 and 34 hours are designated as working "part-time" in the current job held during the reference week. For the March supplement, a person is classified as having worked part-time during the preceding calendar year if he worked less than 35 hours per week in a majority of the weeks in which he worked during the year. Conversely, he is classified as having worked full-time if he worked 35 hours or more per week during a majority of the weeks in which he worked.

**Part-Year Work**—Part-year work is classified as less than 50 weeks' work.

**Population Coverage**—Population coverage includes the civilian population of the United States plus approximately one million members of the Armed Forces in the United States living off post or with their families on post but excludes all other members of the Armed Forces. This file excludes inmates of institutions. The labor force and work experience data are not collected for Armed Forces members.

**Processing Recode**—An item calculated by the processing system from a combination of other items in the database. The second character of the item name is always "R".

**Race**—The population is divided into six groups on the basis of race: White, Black or African American, American Indian or Alaska Native, Asian, Native Hawaiian or Other Pacific Islander, and Other races. The 2011 CPS uses the Census 2010 question on race that allows for more than one race reporting, but does not include the Census 2010 "Some Other Race" category.

**Reentrants**—Persons who previously worked at a full-time job lasting two weeks or longer, but who are out of the labor force prior to beginning to look for work.

**Related Children**—Related children in a family include own children and all other children in the household who are related to the householder by birth, marriage, or adoption. For each type of family unit identified in the CPS, the count of own children under 18 years old is limited to single (never married) children; however, "own children under 25" and "own children of any age," include all children regardless of marital status. The totals include never-married children living away from home in college dormitories.

**Related Subfamily**—A related subfamily is a married couple with or without children, or one parent with one or more own single (never married) children under 18 years old, living in a household and related to, but not including, the householder or spouse. The most common example of a related subfamily is a young married couple sharing the home of the husband's or wife's parents. The number of related subfamilies is not included in the number of families.

**School, Major Activity**—A person who spent most of his time during the survey week attending any kind of public or private school, including trade or vocational schools in which students receive no compensation in money or kind.

**Secondary Individual**—A secondary individual is a person in a household or group quarters such as a guest, roomer, boarder, or resident employee (excluding nonfamily households and inmates of institutions) who is not related to any other person in the household or group quarters.

**Self-Employed**—Self-employed persons are those who work for profit or fees in their own business, profession or trade, or operate a farm.

**Stretches of Unemployment**—A continuous stretch is one that is not interrupted by the person getting a job or leaving the labor market to go to school, to keep house, etc. A period of two weeks or more during which a person is employed or ceased looking for work is considered to break the continuity of the period of seeking work.

**Unable to Work**—A person is classified as unable to work because of long-term physical or mental illness, lasting six months or longer.

**Unedited item**—An item that is produced by the computer automated instrument, either collected during the interview or created by the instrument. The second character of the item name is always "U".

**Unemployed**—(See Labor Force.)

**Unpaid Family Workers**—Unpaid family workers are persons working without pay for 15 hours a week or more on a farm or in a business operated by a member of the household to whom they are related by birth or marriage.

**Unrelated Individuals**—Unrelated individuals are persons of any age (other than inmates of institutions) who are not living with any relatives. An unrelated individual may be (1) a nonfamily householder living alone or with nonrelatives only, (2) a roomer, boarder, or resident employee with no relatives in the household, or (3) a group quarters member who has no relatives living with him/her. Thus, a widow who occupies her house alone or with one or more other persons not related to her, a roomer not related to anyone else in the housing unit, a maid living as a member of her employer's household but with no relatives in the household, and a resident staff member in a hospital living apart from any relatives are all examples of unrelated individuals.

**Unrelated Subfamily**—An unrelated subfamily is a family that does not include among its members the householder and relatives of the householder. Members of unrelated subfamilies may include persons such as guests, roomers, boarders, or resident employees and their relatives living in a household. The number of unrelated subfamily members is included in the number of household members but is not included in the count of family members.

Persons living with relatives in group quarters were formerly considered as members of families. However, the number of such unrelated subfamilies became so small (37,000 in 1967) that beginning with the data for 1968 (and beginning with the census data for 1960) the Bureau of the Census includes persons in these unrelated subfamilies in the count of secondary individuals.

**Veteran Status**—If a person served at any time during the four most recent wartime periods, the codes for all periods of service are entered. A person can report up to 4 periods of service. The following codes are used:

- 0 Children under 15
- 1 September 2001 or later
- 2 August 1990 to August 2001
- 3 May 1975 to July 1990
- 4 Vietnam era (Aug 1964 to Apr 1975)
- 5 February 1955 to July 1964
- 6 Korean War (July 1950 to January 1955)
- 7 January 1947 to June 1950
- 8 World War II (December 1941 to December 1946)
- 9 November 1941 or earlier

**Wage and Salary Workers**—Wage and salary workers receive wages, salary, commission, tips, or pay in kind from a private employer or from a governmental unit. Also included are persons who are self-employed in an incorporated business.

**Workers**—(See Labor Force--Employed.)

**Work Experience**—Includes those persons who during the preceding calendar year did any work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

**Year-Round Full-Time Worker**—A year-round full-time worker is one who usually worked 35 hours or more per week for 50 weeks or more during the preceding calendar year.

## ATTACHMENT 5

### HOW TO USE THE RECORD LAYOUT

Data users familiar with the CPS data files in prior years will see many similarities between the format of this file and those files released before January 1994. As in the past, there are numeric locations on the file which correspond to each variable. There is only one record layout which contains the variables for children, adults, and armed forces members. In prior years, each type of person had a separate record layout.

#### Item Naming Conventions

∅ The first character of each variable name is one of the following:

H - Household item

G - Geography item

\* P - Person item (includes adult items, child items, and armed forces items)

\* There is no need to distinguish adult, child, and armed forces items in the variable names in the new system. The recode **PRPERTYP** (located in positions 161-162) tells you what category the person is in.

∅ The second character of each variable name is one of the following:

E - Edited item

U - Unedited item

X - Allocation flag (see Attachment 15 for more information)

W - Weight

R - Recode

∅ The remaining characters describe the variable.

∅ For multiple entry items, the file contains a separate variable for each possible response. Each item has the same descriptive name but a number is added as the last digit. For example, Question 22A allows separate entries for up to 6 job search methods. The item names are **PELKM1** (this item is edited), **PULKM2**, (this item is unedited), **PULKM3**, etc. These items are located in positions 296-307 of the record layout.

### SUPPLEMENT QUESTIONNAIRE

#### FEBRUARY 2018 ANNUAL ARTS BENCHMARKING SURVEY SUPPLEMENT

**PRESUP** This month we are asking additional questions concerning public participation in the arts and leisure activities.

Enter (1) to continue  
Go to NXXTPR

---

**NXXTPR** I (also) need to talk with name(s). ((Is he/she)/Are either of them/Are any of them) at home now?

Enter line number of eligible person

---

**NXXTPR3** Is this a Self or Proxy response?

- (1) Self
  - (2) Proxy
- 

**EPROXY** Are you currently talking to...?

- (1) Yes
  - (2) No
- 

**NXXTPR5** Enter the line number of the person you are currently talking to.

---

Q1A      The following questions are about (NAME and your/(NAME/you) and (spouse/partner name/(NAME/your) activities during the last 12 months between February (Current day), 2017 and February (Current day), 2018.

During the last 12 months, did (name/you) work with pottery, ceramic, or jewelry?

(1) Yes

(2) No

DK

Don't Know

RF

Refused

---

Q1B      During the last 12 months, did (you/(spouse/partner name)) work with pottery, ceramic, or jewelry?

(1) Yes

(2) No

DK

Don't Know

RF

## ATTACHMENT 9

### INDUSTRY CLASSIFICATION

Industry Classification Codes for Detailed Industry (4 digit)  
(Starting January 2014)

These categories are aggregated into 52 detailed groups and 14 major groups (see pages 10-12 of this attachment). The codes in the right hand column are the NAICS equivalent.

These codes correspond to Items PEIO1ICD and PEIO2ICD, in positions 856-859 and 864-867 of the Basic CPS record layout in all months, **except March**. In the **March**, these codes correspond to PEIOIND and INDUSTRY, in positions 168-171 and 292-295 of the Person record.

| CENSUS<br>CODE                                     | DESCRIPTION   | NAICS<br>CODE   |
|--|---|-----------------|
| <b>Agriculture, Forestry, Fishing, and Hunting</b> |   |                 |
| 0170   | Crop production   | 111             |
| 0180   | Animal production   | 112             |
| 0190   | Forestry except logging   | 1131, 1132      |
| 0270   | Logging   | 1133            |
| 0280   | Fishing, hunting, and trapping  | 114             |
| 0290   | Support activities for agriculture and forestry                           | 115             |
| <b>Mining</b>                                      |   |                 |
| 0370   | Oil and gas extraction  | 211             |
| 0380   | Coal mining   | 2121            |
| 0390   | Metal ore mining  | 2122            |
| 0470   | Nonmetallic mineral mining and quarrying and not specified type of mining | Part of 21      |
| 0490   | Support activities for mining   | 213             |
| <b>Utilities</b>                                   |   |                 |
| 0570   | Electric power generation, transmission and distribution                  | Pt. 2211        |
| 0580   | Natural gas distribution  | Pt. 2212        |
| 0590   | Electric and gas, and other combinations                                  | Pts. 2211, 2212 |
| 0670   | Water, steam, air-conditioning, and irrigation systems                    | 22131, 22133    |
| 0680   | Sewage treatment facilities   | 22132           |
| 0690   | Not specified utilities   | Part of 22      |

| CODE | DESCRIPTION  | INDUSTRY CODE          |
|------|--|------------------------|
|      | <b>Construction</b>  |                        |
| 0770 | ** Construction<br>(Includes the cleaning of buildings and dwellings is incidental during construction and immediately after construction) | 23                     |

# APPENDIX 10

## OCCUPATION CLASSIFICATION

(Beginning May 2012)

These categories are aggregated into 23 detailed groups and 11 major groups (see pages 10-13 and 10-14). The codes in the right hand column are the 2010 SOC equivalent.

These codes correspond to items PEIO1OCD and PEIO2OCD in positions 860-863 and 868-871 of the Basic CPS record layout in all months. In **ASEC**, these codes correspond to items PEIOOCC and OCCUP located in positions 172-172 and 296-299 of the Persons Record. These codes are also applicable for any other CPS supplements that collect occupation data.

| 2010<br>CENSUS<br>CODE        | DESCRIPTION   | 2010<br>SOC<br>CODE |
|-------------------------------|---|---------------------|
| <b>Management Occupations</b> |   |                     |

## LIST 2: FIPS Consolidated Statistical Area (CSA) Codes

The following CSA's (Combined Statistical Areas) contain 2 or more Metropolitan Statistical Areas that are in the CPS sample and are individually identified on the public use files. Micropolitan Statistical Areas are not specifically identified in the CPS and are not used to identify CSA's nor are parts of such areas coded as belonging to CSA's. The component CBSA's identified on the CPS Public Use Files are listed for each CSA.

| CSA Code | CBSA Code                                 | CSA Title<br>Component Parts (CBSA's)  |

### List 3: Individual Principal Cities

Please Note: You must use the CBSA code in combination with the city code to uniquely identify principal cities. If a county name is provided, you must incorporate the county code into any algorithm used to tabulate a specific city's characteristics. The same applies to state codes for multi-state CBSA's.

| CBSA<br>Code | Title<br>City                            | GTINDVPC |

## List 4: FIPS County Codes

Please note that these county codes must be used in conjunction with state codes to create unique county identifiers as county codes start with 001 in each state. Counties are only included on this list if the entire county is identified.

| FIPS<br>County<br>Code | County<br>Name  | State |
|------------------------|-----------------|-------|
| <b>Alabama</b>         |                 |       |
| 003                    | Baldwin         |       |
| 081                    | Lee             |       |
| 097                    | Mobile          |       |
| <b>Arizona</b>         |                 |       |
| 013                    | Maricopa        |       |
| 019                    | Pima            |       |
| 021                    | Pinal           |       |
| 025                    | Yavapai         |       |
| 027                    | Yuma            |       |
| <b>California</b>      |                 |       |
| 001                    | Alameda         |       |
| 007                    | Butte           |       |
| 019                    | Fresno          |       |
| 029                    | Kern            |       |
| 031                    | Kings           |       |
| 037                    | Los Angeles     |       |
| 053                    | Monterey        |       |
| 059                    | Orange          |       |
| 067                    | Sacramento      |       |

## ATTACHMENT 12

### Topcoding of Usual Hourly Earnings

This variable will be topcoded based on an individual's usual hours worked variable, if the individual's edited usual weekly earnings variable is \$999. The topcode is computed such that the product of usual hours times usual hourly wage does not exceed an annualized wage of \$150,000 (\$2,885.00 per week). Below is a list of the appropriate topcode.

| Hours | Topcode | Hours | Topcode | Hours | Topcode |
|-------|---------|-------|---------|-------|---------|
| 1     | None    | 34    | \$84.85 | 67    | \$43.06 |
| 2     | None    | 35    | \$82.43 | 68    | \$42.43 |
| 3     | None    | 36    | \$80.14 | 69    | \$41.81 |
| 4     | None    | 37    | \$77.97 | 70    | \$41.21 |
| 5     | None    | 38    | \$75.92 | 71    | \$40.63 |
| 6     | None    | 39    | \$73.97 | 72    | \$40.07 |
| 7     | None    | 40    | \$72.13 | 73    | \$39.52 |
| 8     | None    | 41    | \$70.37 | 74    | \$38.99 |
| 9     | None    | 42    | \$68.69 | 75    | \$38.47 |
| 10    | None    | 43    | \$67.09 | 76    | \$37.96 |
| 11    | None    | 44    | \$65.57 | 77    | \$37.47 |
| 12    | None    | 45    | \$64.11 | 78    | \$36.99 |
| 13    | None    | 46    | \$62.72 | 79    | \$36.52 |
| 14    | None    | 47    | \$61.38 | 80    | \$36.06 |
| 15    | None    | 48    | \$60.10 | 81    | \$35.62 |
| 16    | None    | 49    | \$58.88 | 82    | \$35.18 |
| 17    | None    | 50    | \$57.70 | 83    | \$34.76 |

### ALLOCATION FLAGS

#### Current Population Survey

For every edited item, there is a corresponding allocation flag with the prefix "PX". The last six characters of the names are the same. For example, PXMLR is the allocation flag for PEMLR. All allocation flags have the following list of possible values.

|    |                                     |
|----|-------------------------------------|
| 00 | VALUE - NO CHANGE                   |
| 01 | BLANK - NO CHANGE                   |
| 02 | DON'T KNOW - NO CHANGE              |
| 03 | REFUSED - NO CHANGE                 |
| 10 | VALUE TO VALUE                      |
| 11 | BLANK TO VALUE                      |
| 12 | DON'T KNOW TO VALUE                 |
| 13 | REFUSED TO VALUE                    |
| 20 | VALUE TO LONGITUDINAL VALUE         |
| 21 | BLANK TO LONGITUDINAL VALUE         |
| 22 | DON'T KNOW TO LONGITUDINAL VALUE    |
| 23 | REFUSED TO LONGITUDINAL VALUE       |
| 30 | VALUE TO ALLOCATED VALUE LONG.      |
| 31 | BLANK TO ALLOCATED VALUE LONG.      |
| 32 | DON'T KNOW TO ALLOCATED VALUE LONG. |
| 33 | REFUSED TO ALLOCATED VALUE LONG.    |
| 40 | VALUE TO ALLOCATED VALUE            |
| 41 | BLANK TO ALLOCATED VALUE            |
| 42 | DON'T KNOW TO ALLOCATED VALUE       |
| 43 | REFUSED TO ALLOCATED VALUE          |

## ATTACHMENT 16

### Source and Accuracy Statement for the February 2018 CPS Microdata File on Annual Arts Benchmarking Survey

#### SOURCE OF THE DATA

The data in this microdata file are from the February 2018 Current Population Survey (CPS). The U.S. Census Bureau conducts the CPS every month, although this file has only February data. The February survey uses two sets of questions, the basic CPS and a set of supplemental questions. The CPS, sponsored jointly by the Census Bureau and the U.S. Bureau of Labor Statistics, is the country's primary source of labor force statistics for the civilian noninstitutionalized population. The National Endowment of the Arts sponsored the supplemental questions for February 2018.

**Basic CPS.** The monthly CPS collects primarily labor force data about the civilian noninstitutionalized population living in the United States. The institutionalized population, which is excluded from the population universe, is composed primarily of the population in correctional institutions and nursing homes (98 percent of the 4.0 million institutionalized people in Census 2010). Starting August 2017, college and university dormitories were also excluded from the population universe because the majority of the residents had usual residences elsewhere. Interviewers ask questions concerning labor force participation about each member 15 years old and over in sample households. Typically, the week containing the nineteenth of the month is the interview week. The week containing the twelfth is the reference week (i.e., the week about which the labor force questions are asked).

The CPS uses a multistage probability sample based on the results of the decennial census, with coverage in all 50 states and the District of Columbia. The sample is continually updated to account for new residential construction. When files from the most recent decennial census become available, the Census Bureau gradually introduces a new sample design for the CPS.

Every ten years, the CPS first stage sample is redesigned<sup>1</sup> reflecting changes based on the most recent decennial census. In the first stage of the sampling process, primary sampling units (PSUs)<sup>2</sup> were selected for sample. In the 2010 sample design, the United States was divided into 1,987 PSUs. These PSUs were then grouped into 852 strata. Within each stratum, a single PSU was chosen for the sample, with its probability of selection proportional to its population as of the most recent decennial census. In the case of strata consisting of only one PSU, the PSU was chosen with certainty.

---

<sup>1</sup> For detailed information on the 2010 sample redesign, please see Bureau of Labor Statistics (2014).

<sup>2</sup> The PSUs correspond to substate areas (i.e., counties or groups of counties) that are geographically contiguous.

Approximately 72,000 housing units were selected for sample from the sampling frame in February. Based on eligibility criteria, nine percent of these housing units were sent directly to computer-assisted telephone interviewing (CATI). The remaining units were assigned to interviewers for computer-assisted personal interviewing (CAPI).<sup>3</sup> Of all housing units in sample, about 61,000 were determined to be eligible for interview. Interviewers obtained interviews at about 51,000 of these units. Noninterviews occur when the occupants are not found at home after repeated calls or are unavailable for some other reason.

**February 2018 Supplement.** In February 2018, Annual Arts Benchmarking Survey questions were asked of the CPS respondent (if aged 18 years or older), as well as another randomly selected household member aged 18 or older. About one-quarter of the sampled households were asked the supplement questions, identified in the Month-in-Sample (MIS) groups 3 and 7. The supplement contained questions about the sampled member's participation in various artistic activities from February 2017 through February 2018. Questions were asked about the type of artistic activity attended including attending a live music, theater, or dance performance. Questions were also asked about reading novels or short stories, poetry, or plays, and taking lessons or classes in photography or film making.

**Current Population Survey Estimation Procedure.** This survey's estimation procedure adjusts weighted sample results to agree with independently derived population estimates of the civilian noninstitutionalized population of the United States and each state (including the District of Columbia). These population estimates, used as controls for the CPS, are prepared monthly to agree with the most current set of population estimates that are released as part of the Census Bureau's population estimates and projections program.

The population controls for the nation are distributed by demographic characteristics in two ways:

- Age, sex, and race (White alone, Black alone, and all other groups combined).
- Age, sex, and Hispanic origin.

The population controls for the states are distributed by race (Black alone and all other race groups combined), age (0-15, 16-44, and 45 and over), and sex.

The independent estimates by age, sex, race, and Hispanic origin, and for states by selected age groups and broad race categories, are developed using the basic demographic accounting formula whereby the population from the 2010 Census data is updated using data on the components of population change (births, deaths, and net international migration) with net internal migration as an additional component in the state population estimates.

---

<sup>3</sup> For further information on CATI and CAPI and the eligibility criteria, please see U.S. Census Bureau (2006).

The net international migration component of the population estimates includes:

- Net international migration of the foreign born;
- Net migration between the United States and Puerto Rico;
- Net migration of natives to and from the United States; and
- Net movement of the Armed Forces population to and from the United States.

Because the latest available information on these components lags the survey date, it is necessary to make short-term projections of these components to develop the estimate for the survey date.

**Annual Arts Benchmarking Survey Estimation Procedure.** The Annual Arts Benchmarking Survey adjusts weighted sample results to agree with the same independently derived population estimates of the civilian noninstitutionalized population of the United States as the CPS. However, the age groups were modified to include only those who are 18 years old or older.

### **ACCURACY OF THE ESTIMATES**

A sample survey estimate has two types of error: sampling and nonsampling. The accuracy of an estimate depends on both types of error. The nature of the sampling error is known given the survey design; the full extent of the nonsampling error is unknown.

**Sampling Error.** Since the CPS estimates come from a sample, they may differ from figures from an enumeration of the entire population using the same questionnaires, instructions, and enumerators. For a given estimator, the difference between an estimate based on a sample and the estimate that would result if the sample were to include the entire population is known as sampling error. Standard errors, as calculated by methods described in “Standard Errors and Their Use,” are primarily measures of the magnitude of sampling error. However, they may include some nonsampling error.

**Nonsampling Error.** For a given estimator, the difference between the estimate that would result if the sample were to include the entire population and the true population value being estimated is known as nonsampling error. There are several sources of nonsampling error that may occur during the development or execution of the survey. It can occur because of circumstances created by the interviewer, the respondent, the survey instrument, or the way the data are collected and processed. For example, errors could occur because:

- The interviewer records the wrong answer, the respondent provides incorrect information, the respondent estimates the requested information, or an unclear survey question is misunderstood by the respondent (measurement error).
- Some individuals who should have been included in the survey frame were missed (coverage error).

- Responses are not collected from all those in the sample or the respondent is unwilling to provide information (nonresponse error).
- Values are estimated imprecisely for missing data (imputation error).
- Forms may be lost, data may be incorrectly keyed, coded, or recoded, etc. (processing error).

To minimize these errors, the Census Bureau applies quality control procedures during all stages of the production process including the design of the survey, the wording of questions, the review of the work of interviewers and coders, and the statistical review of reports.

Two types of nonsampling error that can be examined to a limited extent are nonresponse and undercoverage.

**Nonresponse.** The effect of nonresponse cannot be measured directly, but one indication of its potential effect is the nonresponse rate. For the February 2018 basic CPS, the household-level nonresponse rate was 15.5 percent. The person-level nonresponse rate for the Annual Arts Benchmarking Survey supplement was an additional 19.2 percent. Since the basic CPS nonresponse rate is a household-level rate and the Annual Arts Benchmarking Survey supplement nonresponse rate is a person-level rate, we cannot combine these rates to derive an overall nonresponse rate. Nonresponding households may have fewer persons than interviewed ones, so combining these rates may lead to an overestimate of the true overall nonresponse rate for persons for the Annual Arts Benchmarking Survey supplement.

**Sufficient Partial Interview.** A sufficient partial interview is an incomplete interview in which the household or person answered enough of the questionnaire for the supplement sponsor to consider the interview complete. The remaining supplement questions may have been edited or imputed to fill in missing values. Insufficient partial interviews are considered to be nonrespondents. Refer to the supplement overview attachment in the technical documentation for the specific questions deemed critical by the sponsor as necessary to be answered in order to be considered a sufficient partial interview.

As part of the nonsampling error analysis, the item response rates, item refusal rates, and edits are reviewed. For the Annual Arts Benchmarking Survey supplement, the item refusal rates range from 0.0 percent to 1.1 percent. The item nonresponse rates range from 0.2 percent to 2.5 percent. This survey is not allocated.

**Coverage.** The concept of coverage in the survey sampling process is the extent to which the total population that could be selected for sample “covers” the survey’s target population. Missed housing units and missed people within sample households create undercoverage in the CPS. Overall CPS undercoverage for February 2018 is estimated to be about 11 percent. CPS coverage varies with age, sex, and race. Generally, coverage is

higher for females than for males and higher for non-Blacks than for Blacks. This differential coverage is a general problem for most household-based surveys.

The CPS weighting procedure partially corrects for bias from undercoverage, but biases may still be present when people who are missed by the survey differ from those interviewed in ways other than age, race, sex, Hispanic origin, and state of residence. How this weighting procedure affects other variables in the survey is not precisely known. All of these considerations affect comparisons across different surveys or data sources.

A common measure of survey coverage is the coverage ratio, calculated as the estimated population before poststratification divided by the independent population control. Table 1 shows February 2018 CPS coverage ratios by age and sex for certain race and Hispanic groups. The CPS coverage ratios can exhibit some variability from month to month.

| <b>Table 1. CPS Coverage Ratios: February 2018</b> |                     |             |               |                          |               |                          |               |   |               |                                    |               |
|--|---------------------|-------------|---------------|--------------------------|---------------|--------------------------|---------------|---|---------------|------------------------------------|---------------|
| <b>Age group</b>                                   | <b><u>Total</u></b> |             |               | <b><u>White only</u></b> |               | <b><u>Black only</u></b> |               | <b><u>Residual race<sup>A</sup></u></b> |               | <b><u>Hispanic<sup>B</sup></u></b> |               |

Source: U.S. Census Bureau, Current Population Survey, February 2018.

<sup>A</sup> The Residual race group includes cases indicating a single race other than White or Black, and cases indicating two or more races.

<sup>B</sup> Hispanics may be any race. For a more detailed discussion on the use of parameters for race and ethnicity, please see the “Generalized Variance Parameters” section.

**Comparability of Data.** Data obtained from the CPS and other sources are not entirely comparable. This results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Therefore, caution should be used when comparing results from different sources.

Data users should be careful when comparing the data from this microdata file, which reflects 2010 Census-based controls, with microdata files from January 2003 through December 2011, which reflect 2000 Census-based controls. Ideally, the same population controls should be used when comparing any estimates. In reality, the use of the same population controls is not practical when comparing trend data over a period of 10 to 20

years. Thus, when it is necessary to combine or compare data based on different controls or different designs, data users should be aware that changes in weighting controls or weighting procedures can create small differences between estimates. See the discussion following for information on comparing estimates derived from different controls or different sample designs.

Microdata files from previous years reflect the latest available census-based controls. Although the most recent change in population controls had relatively little impact on summary measures such as averages, medians, and percentage distributions, it did have a significant impact on levels. For example, use of 2010 Census-based controls results in about a 0.2 percent increase from the 2000 census-based controls in the civilian noninstitutionalized population and in the number of families and households. Thus, estimates of levels for data collected in 2012 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain population subgroups than for the total population.

Users should also exercise caution because of changes caused by the phase-in of the Census 2010 files (see “Basic CPS”).<sup>4</sup> During this time period, CPS data were collected from sample designs based on different censuses. Two features of the new CPS design have the potential of affecting published estimates: (1) the temporary disruption of the rotation pattern from August 2014 through June 2015 for a comparatively small portion of the sample and (2) the change in sample areas. Most of the known effect on estimates during and after the sample redesign will be the result of changing from 2000 to 2010 geographic definitions. Research has shown that the national-level estimates of the metropolitan and nonmetropolitan populations should not change appreciably because of the new sample design. However, users should still exercise caution when comparing metropolitan and nonmetropolitan estimates across years with a design change, especially at the state level.

Caution should also be used when comparing Hispanic estimates over time. No independent population control totals for people of Hispanic origin were used before 1985.

**A Nonsampling Error Warning.** Since the full extent of the nonsampling error is unknown, one should be particularly careful when interpreting results based on small differences between estimates. The Census Bureau recommends that data users incorporate information about nonsampling errors into their analyses, as nonsampling error could impact the conclusions drawn from the results. Caution should also be used when interpreting results based on a relatively small number of cases. Summary measures (such as medians and percentage distributions) probably do not reveal useful information when computed on a subpopulation smaller than 75,000.

For additional information on nonsampling error, including the possible impact on CPS data, when known, refer to U.S. Census Bureau (2006) and Brooks & Bailar (1978).

---

<sup>4</sup> The phase-in process using the 2010 Census files began April 2014.

**Standard Errors and Their Use.** The sample estimate and its standard error enable one to construct a confidence interval. A confidence interval is a range about a given estimate that has a specified probability of containing the average result of all possible samples. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples, but one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis is that the population parameters are different. An example of this would be comparing the percentage of men who were part-time workers to the percentage of women who were part-time workers.

Tests may be performed at various levels of significance. A significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. For example, to conclude that two characteristics are different at the 0.10 level of significance, the absolute value of the estimated difference between characteristics must be greater than or equal to 1.645 times the standard error of the difference.

The Census Bureau uses 90-percent confidence intervals and 0.10 levels of significance to determine statistical validity. Consult standard statistical textbooks for alternative criteria.

**Estimating Standard Errors.** The Census Bureau uses replication methods to estimate the standard errors of CPS estimates. These methods primarily measure the magnitude of sampling error. However, they do measure some effects of nonsampling error as well. They do not measure systematic biases in the data associated with nonsampling error. Bias is the average over all possible samples of the differences between the sample estimates and the true value.

There are two ways to calculate standard errors for the CPS microdata file on the Annual Arts Benchmarking Survey. They are:

- Direct estimates created from replicate weighting methods;
- Generalized variance estimates created from generalized variance function parameters  $a$  and  $b$ .

While replicate weighting methods provide the most accurate variance estimates, this approach requires more computing resources and more expertise on the part of the user. The Generalized Variance Function (GVF) parameters provide a method of balancing accuracy with resource usage as well as a smoothing effect on standard error estimates across time. For more information on calculating direct estimates, see U.S. Census Bureau (2009). For more information on GVF estimates, refer to the “Generalized Variance Parameters” section.

**Generalized Variance Parameters.** While it is possible to compute and present an estimate of the standard error based on the survey data for each estimate in a report, there are a number of reasons why this is not done. A presentation of the individual standard errors would be of limited use, since one could not possibly predict all of the combinations of results that may be of interest to data users. Additionally, data users have access to CPS microdata files, and it is impossible to compute in advance the standard error for every estimate one might obtain from those data sets. Moreover, variance estimates are based on sample data and have variances of their own. Therefore, some methods of stabilizing these estimates of variance, for example, by generalizing or averaging over time, may be used to improve their reliability.

Experience has shown that certain groups of estimates have similar relationships between their variances and expected values. Modeling or generalizing may provide more stable variance estimates by taking advantage of these similarities. The GVF is a simple model that expresses the variance as a function of the expected value of the survey estimate. The parameters of the GVF are estimated using direct replicate variances. These GVF parameters provide a relatively easy method to obtain approximate standard errors for numerous characteristics.

In this source and accuracy statement, Tables 3 through 7 provide illustrations for calculating standard errors. Table 8 provides the GVF parameters for labor force estimates, and Table 9 provides GVF parameters for characteristics from the February 2018 Annual Arts Benchmarking Survey supplement.

The basic CPS questionnaire records the race and ethnicity of each respondent. With respect to race, a respondent can be White, Black, Asian, American Indian and Alaskan Native (AIAN), Native Hawaiian and Other Pacific Islander (NHOPi), or combinations of two or more of the preceding. A respondent’s ethnicity can be Hispanic or non-Hispanic, regardless of race.

The GVF parameters to use in computing standard errors are dependent upon the race/ethnicity group of interest. The following table summarizes the relationship between the race/ethnicity group of interest and the GVF parameters to use in standard error calculations.

| <b>Table 2. Estimation Groups of Interest and Generalized Variance Parameters</b>                   |   |
|---|---|
| <b>Race/ethnicity group of interest</b>   | <b>Generalized variance parameters to use in standard error calculations</b>                        |
| Total population  | Total or White  |
| White alone, White alone or in combination (AOIC), or White non-Hispanic population                 | Total or White  |
| Black alone, Black AOIC, or Black non-Hispanic population   | Black   |
| Asian alone, Asian AOIC, or Asian non-Hispanic population   | Asian, American Indian and Alaska Native (AIAN), Native Hawaiian and Other Pacific Islander (NHOPI) |
| AIAN alone, AIAN AOIC, or AIAN non-Hispanic population  | Asian, AIAN, NHOPI  |
| NHOPI alone, NHOPI AOIC, or NHOPI non-Hispanic population   | Asian, AIAN, NHOPI  |
| Populations from other race groups  | Asian, AIAN, NHOPI  |
| Hispanic <sup>A</sup> population  | Hispanic <sup>A</sup>   |
| Two or more races <sup>B</sup> – employment/unemployment and educational attainment characteristics | Black   |
| Two or more races <sup>B</sup> – all other characteristics  | Asian, AIAN, NHOPI  |

Source: U.S. Census Bureau, Current Population Survey, internal data files.

<sup>A</sup> Hispanics may be any race.

<sup>B</sup> Two or more races refers to the group of cases self-classified as having two or more races.

When calculating standard errors for an estimate of interest from cross-tabulations involving different characteristics, use the set of GVF parameters for the characteristic that will give the largest standard error. If the estimate of interest is strictly from basic CPS data, the GVF parameters will come from the CPS GVF table (Table 8). If the estimate is using Annual Arts Benchmarking Survey supplement data, the GVF parameters will come from the Annual Arts Benchmarking Survey supplement GVF table (Table 9).

**Standard Errors of Estimated Numbers.** The approximate standard error,  $s_x$ , of an estimated number from this microdata file can be obtained by using the formula:

$$s_x = \sqrt{ax^2 + bx} \quad (1)$$

Here  $x$  is the size of the estimate, and  $a$  and  $b$  are the parameters in Table 8 or 9 associated with the particular type of characteristic.

#### Illustration 1

Suppose there were 3,977,000 unemployed men (ages 16 and up) in the civilian labor force. Use the appropriate parameters from Table 8 and Formula (1) to get

| <b>Table 3. Illustration of Standard Errors of Estimated Numbers</b> |                        |
|--|------------------------|
| Number of unemployed males in the civilian labor force ( <i>x</i> )  | 3,977,000              |
| a-parameter ( <i>a</i> )   | -0.000031              |
| b-parameter ( <i>b</i> )   | 2,947                  |
| Standard error   | 106,000                |
| 90-percent confidence interval                                       | 3,803,000 to 4,151,000 |

Source: U.S. Census Bureau, Current Population Survey, Annual Arts Benchmarking Survey, February 2018.

The standard error is calculated as

$$s_x = \sqrt{-0.000031 \times 3,977,000^2 + 2,947 \times 3,977,000},$$

which, rounded to the nearest thousand, is 106,000. The 90-percent confidence interval is calculated as  $3,977,000 \pm 1.645 \times 106,000$ .

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

**Standard Errors of Estimated Percentages and Ratios.** The reliability of an estimated percentage or ratio using sample data depends on the size of both the numerator, *x*, and denominator, *y*. This section presents two equations to calculate standard errors of estimated percentages and ratios. The first equation is simplified and can be used for most percentage estimates; the second equation can be used for all percentage and ratio estimates but is more complex. Use the following questions to determine if the simplified equation can be used to calculate the standard error of a percentage:

- 1) Do both the numerator and denominator use the same parameters from Table 8 or 9?
- 2) Is the denominator a CPS population control - a total by race/ethnicity (excluding the group self-classified as having two or more races), sex, or age group, or state? See "Current Population Survey Estimation Procedure" for more information on the specific CPS population controls.

If the answer to either question is yes, then use the following simplified formula to find the approximate standard error,  $s_{y,p}$ , of the estimated percentage *p*:

$$s_{y,p} = \sqrt{\frac{b}{y} p(100 - p)} \quad (2)$$

Here *y* is the total number of people, families, households, or unrelated individuals in the denominator of the percentage, *p* is the percentage  $100 \times x/y$  ( $0 \leq p \leq 100$ ), and *b* is the parameter in Table 8 or 9 associated with the characteristic in the numerator of the percentage.

If the answer to both questions is no, or the estimate is not a percentage, compute the standard error of the ratio using

$$s_{x/y} = \frac{x}{y} \sqrt{\left(\frac{s_x}{x}\right)^2 + \left(\frac{s_y}{y}\right)^2 - 2r \frac{s_x s_y}{xy}} \quad (3)$$

The standard error of the numerator,  $s_x$ , and that of the denominator,  $s_y$ , may be calculated using standard error formulas described in this document. In Formula (3),  $r$  represents the correlation between the numerator and the denominator of the estimate. If  $r$  has not been previously calculated for a specific estimate, consider the type of ratio being estimated. For ratios where the numerator is a subset of the denominator, use

$$r = \frac{x \cdot s_y}{y \cdot s_x} \quad (4)$$

For ratios where the denominator is a count of families or households and the numerator is a count of people in those families or households with a certain characteristic and there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of  $r$ . An example of this type is the average number of children per family with children. For all other types of ratios,  $r$  is assumed to be zero. If  $r$  is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio.

NOTE: For estimates expressed as the ratio of  $x$  per 100  $y$  or  $x$  per 1,000  $y$ , multiply Formula (3) by 100 or 1,000, respectively, to obtain the standard error.

## Illustration 2

Suppose there were 127,248,000 women aged 18 and over, and 4.1 percent indicate they performed or practiced any dance. Use the appropriate parameter from Table 9 and Formula (2), since the denominator in this percentage is treated as a CPS population control, to get

| Table 4. Illustration of Standard Errors of Estimated Percentages                  |             |
|--|-------------|
| Percentage of women 18+ who indicate they performed or practiced any dance ( $p$ ) | 4.1         |
| Base ( $y$ )   | 127,248,000 |
| b-parameter ( $b$ )  | 19,263      |
| Standard error   | 0.24        |
| 90-percent confidence interval   | 3.7 to 4.5  |

Source: U.S. Census Bureau, Current Population Survey, Annual Arts Benchmarking Survey, February 2018.

The standard error is calculated as

$$s_{y,p} = \sqrt{\frac{19,263}{127,248,000} \times 4.1 \times (100.0 - 4.1)} = 0.24$$

The 90-percent confidence interval for the estimated percentage of women aged 18 years old or older who performed or practiced any dance is from 3.7 to 4.5 percent (i.e.,  $4.1 \pm 1.645 \times 0.24$ ).

### Illustration 3

Suppose the ratio of men to women working part-time was 10,843,000 to 18,597,000, or 58.3 percent. Use Formulas (1) and (3) with  $r = 0$  and the appropriate parameters from Table 8 to get

| <b>Table 5. Illustration of Standard Errors of Ratios</b> |                          |                          |                 |
|---|--------------------------|--------------------------|-----------------|
|   | Men (x)                  | Women (y)                | Ratio (percent) |
| Number who work part-time                                 | 10,843,000               | 18,597,000               | 58.3            |
| a parameter (a)   | -0.000031                | -0.000028                | -               |
| b parameter (b)   | 2,947                    | 2,788                    | -               |
| Standard error  | 168,000                  | 205,000                  | 1.1             |
| 90-percent confidence interval                            | 10,567,000 to 11,119,000 | 18,260,000 to 18,934,000 | 56.5 to 60.1    |

Source: U.S. Census Bureau, Current Population Survey, Annual Arts Benchmarking Survey, February 2018.

The standard error is calculated as

$$s_{x/y} = \frac{10,843,000}{18,597,000} \sqrt{\left(\frac{168,000}{10,843,000}\right)^2 + \left(\frac{205,000}{18,597,000}\right)^2} = 0.011 = 1.1\%$$

and the 90-percent confidence interval is calculated as  $58.3 \pm 1.645 \times 1.1$ .

### Illustration 4

Suppose that the number of unemployed males was 3,977,000 and the total number unemployed was 7,091,000. The ratio of unemployed males to the total number unemployed would be 0.561 or 56.1 percent. The numerator and denominator in this percentage do not use the same parameters from Table 8, and the denominator is not a CPS population control. Therefore, use Formulas (3) and (4) for the standard error and correlation,  $r$ , along with Formula (1) and the appropriate parameters from Table 8 to get

| <b>Table 6. Second Illustration of Standard Errors of Ratios</b> |                        |                        |                 |
|--|------------------------|------------------------|-----------------|
|  | Males (x)              | Total (y)              | Ratio (percent) |
| Number Unemployed  | 3,977,000              | 7,091,000              | 56.1            |
| a parameter (a)  | -0.000031              | -0.000017              | -               |
| b parameter (b)  | 2,947                  | 3,244                  | -               |
| correlation (r)  | -                      | -                      | 78.8            |
| Standard error   | 106,000                | 149,000                | 0.9             |
| 90-percent confidence interval                                   | 3,803,000 to 4,151,000 | 6,846,000 to 7,336,000 | 54.6 to 57.6    |

Source: U.S. Census Bureau, Current Population Survey, Annual Arts Benchmarking Survey, February 2018.

The correlation is calculated as

$$r = \frac{3,977,000 * 149,000}{7,091,000 * 106,000} = 0.788 = 78.8\%$$

The standard error is calculated as

$$s_{x/y} = \frac{3,977,000}{7,091,000} \sqrt{\left(\frac{106,000}{3,977,000}\right)^2 + \left(\frac{149,000}{7,091,000}\right)^2 - \left(2 * 0.788 * \frac{106,000 * 149,000}{3,977,000 * 7,091,000}\right)}$$

$$= 0.009 = 0.9\%$$

and the 90-percent confidence interval is calculated as  $56.1 \pm 1.645 \times 0.9$ .

**Standard Errors of Estimated Differences.** The standard error of the difference between two sample estimates is approximately equal to

$$s_{x_1-x_2} = \sqrt{s_{x_1}^2 + s_{x_2}^2} \quad (5)$$

where  $s_{x_1}$  and  $s_{x_2}$  are the standard errors of the estimates,  $x_1$  and  $x_2$ . The estimates can be numbers, percentages, ratios, etc. This will result in accurate estimates of the standard error of the same characteristic in two different areas or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

#### Illustration 5

Suppose that of the 70,109,000 people with a high school diploma but no college, 5.6 percent took photographs as an artistic activity. In addition, of the 69,334,000 people with some college or associate degree, 11.6 percent took photographs as an artistic activity. Use the appropriate parameters from Table 9 and Formulas (2) and (5) to get

| <b>Table 7. Illustration of Standard Errors of Estimated Differences</b> |                               |                                      |            |
|--|-------------------------------|--------------------------------------|------------|
|  | High School Diploma ( $x_1$ ) | Some College or Associates ( $x_2$ ) | Difference |
| Percentage who took lessons in photography or filmmaking ( $p$ )         | 5.6                           | 11.6                                 | 6.0        |
| Base   | 70,109,000                    | 69,334,000                           | -          |
| b parameter ( $b$ )  | 23,262                        | 23,262                               | -          |
| Standard error   | 0.42                          | 0.59                                 | 0.72       |
| 90-percent confidence interval   | 4.9 to 6.3                    | 10.6 to 12.6                         | 4.8 to 7.2 |

Source: U.S. Census Bureau, Current Population Survey, Annual Arts Benchmarking Survey, February 2018.

The standard error of the difference is calculated as

$$s_{x_1-x_2} = \sqrt{0.42^2 + 0.59^2} = 0.72$$

The 90-percent confidence interval around the difference is calculated as  $6.0 \pm 1.645 \times 0.72$ . Since this interval does not include zero, we can conclude with 90-percent confidence that the percentage of people with some college or associate degree who took photographs as an artistic activity is greater than the percentage of people with a high school diploma who took photographs as an artistic activity.

**Standard Errors of Quarterly or Yearly Averages.** For information on calculating standard errors for labor force data from the CPS which involve quarterly or yearly averages, please see Bureau of Labor Statistics (2006).

**Technical Assistance.** If you require assistance or additional information, please contact the Demographic Statistical Methods Division via e-mail at [dsmd.source.and.accuracy@census.gov](mailto:dsmd.source.and.accuracy@census.gov).

**Table 8. Parameters for Computation of Standard Errors for Labor Force Characteristics: February 2018**

| Characteristic   | a         | b     |
|--|-----------|-------|
| <b>Total or White</b>  |           |       |
| <i>Civilian labor force, employed</i>  | -0.000013 | 2,481 |
| <i>Unemployed</i>  | -0.000017 | 3,244 |
| <i>Not in labor force</i>  | -0.000013 | 2,432 |

| Both sexes, 16 to 19 years   | -0.000909 | 3,316 |

Source: U.S. Census Bureau, Internal Current Population Survey data files for the 2010 Design.

Notes: These parameters are to be applied to basic CPS monthly labor force estimates. The Total or White, Black, and Asian, AIAN, NHOPI parameters are to be used for both alone and in combination race group estimates. For nonmetropolitan characteristics, multiply the a- and b-parameters by 1.5. If the characteristic of interest is total state population, not subtotaled by race or ethnicity, the a- and b-parameters are zero. For foreign-born and noncitizen characteristics for Total and White, the a- and b-parameters should be multiplied by 1.3. No adjustment is necessary for foreign-born and noncitizen characteristics for Black, Hispanic, and Asian, AIAN, NHOPI parameters. For the groups self-classified as having two or more races, use the Asian, AIAN, NHOPI parameters for all employment characteristics.

**Table 9. Parameters for Computation of Standard Errors for Annual Arts  
Benchmarking Survey Characteristics: February 2018**

| Characteristic                                    | Characteristic | Characteristic | Characteristic |
|---|----------------|----------------|----------------|
| All Adults  | -0.000094      | 24,096         | 256,933,621    |

Source: U.S. Census Bureau, Current Population Survey, Internal data from the Annual Arts Benchmarking Survey, February 2018.

<sup>A</sup> Hispanics may be any race. For a more detailed discussion on the use of parameters for race and ethnicity, please see the “Generalized Variance Parameters” section.

Notes: These parameters are to be applied to the Annual Arts Benchmarking Survey Supplement data. For nonmetropolitan characteristics, multiply the a- and b-parameters by 1.5. If the characteristic of interest is total state population, not subtotaled by race or ethnicity, the a- and b-parameters are zero. For foreign-born and noncitizen characteristics for non-Hispanic White, the a- and b-parameters should be multiplied by 1.3. No adjustment is necessary for foreign-born and noncitizen characteristics for non-Hispanic Black, non-Hispanic Other, and Hispanic parameters.
